Press release

Date: 24th January 2020

Written by Daniel Schön

Inclusion of R-Link's first patient

We are proud to announce that we have included our first patient on the **10th January 2020 in Dresden, Germany.**

Within R-LiNK it is planned to recruit a total of 300 patients within 15 centres. We are convinced that our research will set a milestone in lithium treatment and we will gain great new knowledge from our research. Our goal is to find new ways in lithium treatment, incorporating new methods and approaches.

With our research, we aim to help reduce hospitalization for bipolar patients, reduce morbidity and mortality. In this context, we want to increase the quality of life and social participation.

Michael Bauer
R-LiNK WP 9

European
Commission

The R-Link project is a European Union's Horizon 2020 Research and Innovation programme under Grant Agreement N° 754907.
